Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

- The rejection of claim 6 under 35 U.S.C. 112, first paragraph, has been withdrawn due to the modification made in the amendment.
- The close reference for the current invention is Brunner (U.S. 4,052,441).

Brunner teaches the process of producing esters of monocarboxylic acids and dicarboxylic acids or their esters from the waste solution of cyclohexanone manufacture which consists of salts of monocarboxy and dicarboxy aliphatic acids in the following step of:

- a. acidifying a waste salt solution with a strong acid to produce an aqueous phase and an organic phase;
- b. separating a water-containing fraction from the resulting organic phase by distillation at a temperature below 120⁰ C.;
- c. esterifying the aqueous fraction with a lower alcohol in order to produce the desired esters.

The instant invention prior art, however, differ from the prior art in that the claimed waste solution is generated from the caprolactam process instead of the waste solution of cyclohexanone manufacture ; the reaction process is conducted at a temperature of from 120 to 200⁰ C ; there are no two-stage concentration steps. In addition, unless all limitations of the

claims are met, there is no prior art rejection. See In re Zurko 59 USPQ 2d 1690 (Fed Cir. 1991) and In re Lee, 61 USPQ 1430 (Fed Cir. 1991).

Therefore, the claimed invention would not have been obvious to the person with an ordinary skill in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning the communication after allowance such as sending all post-allowance correspondence should be directed to "Box Issue Fee" or faxed directly to PUBS at 703-305-8755. This will expedite the process of these papers.
